Standard tube dispensing cassette

Standard tube dispensing cassettes are designed to be used with the Multidrop Combi, Multidrop 384 and Multidrop DW dispensers.

Details:
- Plastic cover structure, wide silicone tubing and polypropylene tip comb with 0.5 mm tip inner diameter
- Designed for volumes 5 μL and greater, and when used with Multidrop Combi dispenser up to 2.5 mL
- Most suitable for dispensing volumes of 20 μL and greater
- Wide tubing allows high speed for dispensing of large volumes
- Standard tube cassettes are also available with longer tubing versions, ideal for automated systems where reagent vessels are remote from the instruments
- The user definable tubing length from 50 cm to 200 cm allows adjustment just according to system

Small tube dispensing cassette

Small tube dispensing cassettes can be used with the Multidrop Combi and Multidrop Micro dispensers.

Details:
- Plastic cover structure, silicone tubing with small tubing diameter and polypropylene or metal tip with orifice 0.22 mm
- Tip structure and design optimized for efficient and reproducible dispensing of small volumes from 0.5 μL up to 50 μL
- Small tube dispensing cassettes are available with either plastic or metal tips to accommodate a variety of reagents
- Long small tube cassettes are ideally suited for use with automated systems. The eight channels are joined as single tube, minimizing liquid resistance

SMART dispensing cassettes

SMART dispensing cassettes are used with the Multidrop Combi SMART dispenser. These cassettes are equipped with a SMART information chip to store lifetime dispensing data for the cassette. When used with Multidrop Combi SMART dispenser, the remaining usage time is displayed. SMART cassettes are available in standard and small tube versions and are distinguished from normal cassettes by an antenna tag.

Tubing sets

Compatible with standard tube dispensing cassettes, tubing sets are an economical choice. These sets require opening the cassette cover and calibrating prior to use. Long tubing versions are ideal for use with automated systems.

Cassette Maintenance – Best Practices

- Clean the dispensing cassette daily after use. Wash by dispensing ddH2O through the tubing. Be sure to wash all tubing completely
- Standard tube cassettes: use min. 20 ml ddH2O
- Small tube cassettes: use min. 10 ml of ddH2O
- If cleaning with water is not sufficient, use a mild laboratory detergent (e.g. TWEEN® or Triton™ X-100) or a cleaning solution (e.g. 1% Micro-90® Cleaning Solution from Cole-Parmer)
- Then dispense with a large amount of ddH2O. Empty the tubing
- After washing, store the dispensing cassette in its rest position and dry at room temperature.
- Caution: When dispensing proteins, wash first with ddH2O before ethanol to avoid precipitation.

Multidrop microplate dispensers

Multidrop Combi dispenser offers the ultimate flexibility for reagent dispensing. The SMART version of Multidrop Combi provides an advanced built-in cassette lifetime tracking system.

Multidrop 384 dispenser is extremely user friendly. Simply select the plate and volume and you are ready to start filling 96- and 384-well plates.

Multidrop DW dispenser is specially designed for dispensing into DW plates.

**THERMO SCIENTIFIC MULTIDROP DISPENSING CASSETTES**

The comprehensive line of Thermo Scientific Multidrop dispensing cassettes offers optimal solutions for a wide volume range and a variety of reagents for the best performance and results.

The autoclavable Multidrop® dispensing cassettes come with different tubing size, and tip material and size. Choose between standard and small tube cassettes, or SMART versions of these which store dispensing lifetime data. Dispensing cassettes are available as single versions, 5-packs and 10-packs for different throughput needs.
